Create VOD from a Recording Live Streaming (1/3)

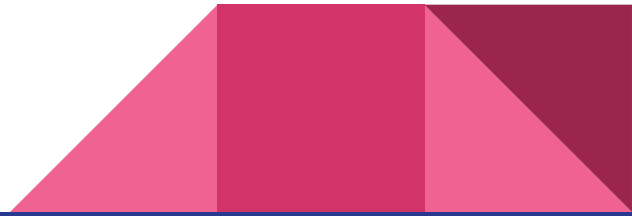
We are assuming the Live-Streaming was recorded (or is still running) and we need to create a VOD extracted from the Live-Streaming.

1. log-in to the MMS:
   a. https://mms-gui.cloud-mms.com/catramms/login.xhtml
2. open the Workflow MMS Editor
   a. menu on the left: Advanced -> Workflow Editor
3. edit the predefined MMS ‘VODFromRecording’ Workflow
   a. on the right, into the ‘Predefined MMS Workflows’ windows, edit the ‘VODFromRecording’ workflow

Create VOD from a Recording Live Streaming (2/3)

4. make sure the following fields are correctly initialized
    a. click on the Live-Cut task to get the properties
        i. Live-Cut Details -> Recording code: it has to be the same code used by the Recorder task when the Recorder was initialized
        ii. Live-Cut Details -> Cut Start and Cut End: start and end of the VOD we need to create
        iii. Media Generated -> Title: title of the VOD
        iv. Media Generated -> Media Item Retention: retention of the VOD. When the retention expires the VOD will be automatically removed
5. execute the Workflow
    a. click the ‘Execute Workflow’ button on the top-right to run the workflow

Create VOD from a Recording Live Streaming (3/3)

For monitoring:


- workflow status
  a. menu on the left: Advanced -> Workflows Status
- encoding job
  a. menu on the left: Advanced -> Encoding Jobs Queue
- recording chunks created every minute
  a. menu on the left: Advanced -> Recording chunks
